

# Get modular smart panel functionality for less with Square D

## QO Smart Panel Solution

### Transform QO Plug-on Neutral panels into smart panels

The trusted leader in circuit protection has made it easier, faster, and less costly to upgrade Square D™ QO™ Plug-on Neutral (PoN) panels into smart panels.

Scalable and modular, this QO smart panel solution with Square D control relays provides load control at the circuit level and easily accommodates customization and future upgrades. It also works seamlessly with the Schneider Energy Monitor (formerly Wiser Energy monitor) for more control over home energy management.

If your homeowners are asking for smarter technology to make their homes more energy efficient, you can give it to them – at a price they can afford – with the new home energy management solution from Schneider Electric. Now you can help them create homes ready for the future in a single upgrade, making it easy to add solar, EV charging, and battery backup.

### Now you can help homeowners:

- **Save money:** Understand where and how energy is being used and gain more control over their energy use.
- **Reduce energy usage:** Remotely turn off power to larger electrical loads when unnecessary.
- **Extend backup power runtime:** Easily control larger electrical loads at the appliance and circuit level during an outage.
- **Monitor energy 24/7:** Access and manage energy usage in real time with a single app.
- **Future-proof their home:** Easily add solar, EV charging, and battery backup in the future.

# Making your job easier

## Make homes future-ready at a lower cost

- **Faster install:** Quickly and easily install the Schneider Energy Monitor and Square D control relays into the QO PoN panel now or in the future.
- **Modular/scalable load control:** Place relays where you need them, for the two, three, or more circuits your homeowners want to control.
- **Easy maintenance:** Easily swap out the impacted relay without replacing the entire load center, benefitting you and the homeowner.
- **Future-proof:** Standardize the QO PoN panel for a safer, more reliable product that simplifies adding future load control, solar, battery, and EV capabilities.

## How the smart panel solution works

- Start with the QO PoN panel – existing or new – and install Square D control relays and the energy monitor.
- The connected relays will allow homeowners to monitor and control their energy at the circuit level, including electric water heaters, ovens, HVAC systems, or any other circuit using the Schneider Home mobile app.
- The monitor and relays will also help homeowners optimize home energy resources, including solar power, battery backup, and generators in the event of a power outage.
- For more control, add our X Series connected wiring devices for control down to the plug and switch level.

### The leader in circuit protection is here to make your job easier.

The Square D QO PoN smart panel solution is just one example of Schneider Electric's 100-year legacy of building safety, reliability, and quality into every one of our electrical products.

If your homeowners are ready for a smarter, more energy efficient home of the future, we just made it easier and more cost effective with the new home energy management solution from Schneider Electric.
